

15th International Master Course in Phlebology

The Baltic Society
of Phlebology

Endovenous Ablation in Modern Treatment of Venous Diseases

Master Course for Phlebologists, Dermatologists, Surgeons and Vascular Surgeons

DR. MAURINS VEIN CLINIC
LASER MEDICAL CLINIC

Riga
November 24-25, 2017

The 15th International Master Course of Phlebology in Riga 2017 is organized for the professionals wanting to gain general introduction or recent update of endovenous ablation of venous diseases. The proposed event will highlight the most recent endovascular techniques in treatment of venous diseases. The Master Course will focus on the most important aspects of the endovenous ablation, such as the distance from the deep vein where the ablation of the target vein is started, as well as the technologies and methods covering a variety of topical subjects, starting from the endovenous ablation of saphenous veins and their superficial tributaries, to sclerotherapy of residual tributaries after the endovenous ablation in order to achieve the best possible functional and aesthetic results with minimal risk of complications and further side effects.

The Baltic Society of Phlebology are delighted and honoured that the faculty of the 15th International Master Course of Phlebology will be composed of following high-level professionals acknowledged all over the world:

Johann Chris Ragg, MD
Founder and Head of angioclinic® Vein Centres
Berlin, Germany

Dr. Ragg is one of the first physicians in Europe ever specializing in endovenous procedures. During the course he will make presentations and practical demonstrations regarding his own invention - the treatment of superficial tributaries by using of compression film bandage.

Frantisek Zernovicky Jr., MD
University Clinic of Vascular Surgery
Bratislava, Slovakia

Dr. Zernovicky has performed more than 4000 different vein ablations - RFA, Laser, Glue, MOCA. The main aim of Dr. Zernovicky is to select the optimal procedure for each particular patient, as well as to develop the best possible protocol for the particular device. During the course he will discuss selection of optimal technology for treatment of each particular patient.

Petar Dragic, MD
Founder and Head of Dr. Dragic Clinics
Belgrade, Serbia

Dr. Dragic has performed more than 8000 laser vein operations, one of his research interest being achievement of Lasercrossotomy. During the course he will discuss and make practical presentations regarding special aspects of his technique.

Prof. Dr. Uldis Maurins, MD
Dr. Maurins Vein Clinic
Riga, Latvia

Dr. Maurins is an internationally recognized expert in endovenous laser therapy particularly specializing in laser surgery and phlebology. During the course he will present results of the latest studies of using 1940 nm laser wavelength in endovenous ablation, as well as demonstrate practical aspects regarding the usage of this wavelength during the practical part of the course.
